

One Tough Tee.

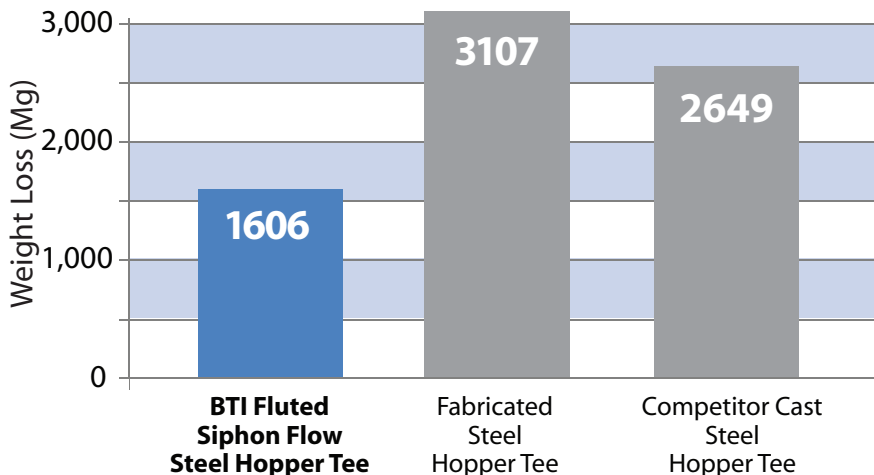

SiphonFlow™ Hopper Tees

Special Alloy Steel combined with a Fluted Design causes less turbulence and air flow eddy currents resulting in less wear on Tee surface. It all adds up to the toughest and longest lasting tee on the market.

Independent testing proves less wear/weight loss means a longer lasting tee!

Wear/Weight Loss During ASTM G65 Abrasion Test

Abrasion Resistant Steel Straight & Bottom Drop Fluted SiphonFlow™ Hopper Tee

SiphonFlow abrasion resistant steel tees have all the same features and benefits of the standard SiphonFlow tee, but are made of a special heat treated alloy steel which field tests have proven will outlast any abrasion resistant tee on the market today. An independent testing lab has proven that our special alloy SiphonFlow tees will outperform fabricated steel and cast hopper tees on the market today. And, unlike other abrasion resistant steel tees, the SiphonFlow tee **speeds up** your unloading process, not slow it down due to a reduced I.D. All SiphonFlow steel tees have zinc impregnated coatings to prevent rusting from salts and road grime. All versions of the new Bulk Tank Fluted SiphonFlow Hopper Tee Line are lighter in weight and have innovative design features to enable end users to reduce fuel consumption and overall total operational costs.
