

# Save Time, Labor Costs & Material

**BTI**  
**AutoClean**<sup>®</sup>  
Filtration System

The best **Return on Investment** your company can make.

## Conventional Vac Load Systems

Can take up to 9 hours to load  
Loading process may be shut down multiple times to manually clean filtration media  
The loading process is significantly slowed down by clogged filtration

**SAVE  
TIME**

## **BTI** **AutoClean**<sup>®</sup> Filtration System

Auto-loads trailer in under 1-2 hours, depending on the material.  
Filtration media is AutoCleaned during loading.  
The filtration is cleaned during loading to **maintain optimal vacuum levels**

Throughout the loading process, drivers are required to monitor the system constantly  
Filtration clogging can damage blowers, and the cost of replacement can be as high as \$10,000.  
Routine maintenance takes hours

**SAVE  
LABOR**

Zero driver interaction with AutoClean system during loading  
**Prevents premature blower failure** by blocking materials from reaching pre-filters on blowers and causing them to lock up.  
Minimal maintenance

Can waste hundreds of pounds of material per load  
Material being loaded is not recycled

**SAVE  
MATERIAL**

**With the flip of a switch**, as little as 1 cup of material is left in the filter canister after auto-loading the material which can be recycled back into the trailer

*Comparisons made on Adipic Acid load.*

All BTI products are guaranteed to:

**LAST LONGER. WORK BETTER.**
